Cyber Crime
Cyber insurance and data protection

Mission

Digitalization makes it necessary for all enterprises – whether start-ups, SMEs or corporations – to improve their risk awareness and the safety measures related to information technology.

Meanwhile, networks, data communication systems and automated IT processes are among the critical areas within the company infrastructure that are threatened by interruptions in operations in the event of failure. An effective risk management system requires thorough analysis of the IT landscape, as well as identification of weak areas. Based on this situation, we offer a support concept for the transfer of risk to the risk bearer.

Team of Experts

Our services

- Individual cyber solutions for service providers, retailers, manufacturing companies, public enterprises and financial institutions. Special concepts for business and legal consultants, architects and engineers, public transportation companies and the real estate/housing industry.
- Professional risk analysis and IT consultancy by our external network of experts with a focus on: Social engineering & phishing, IT security and forensics, legal consulting and reputation management, data protection and IT compliance.
- Insurance solutions in combination with other types of insurance (breach of contract, IT liability, D&O, etc.).
- Custom-tailored expert support following a cyber incident. Our recovery concept includes a professional and timely response to incidents and provides for effective quantification of the effects, processing of third-party rights, and assertion of insurance claims.

360° Service
